ELECTROMAGNETIC SHIELDING STRUCTURE

Filed by:

SAINT-GOBAIN GLASS FRANCE

ABSTRACT

Electromagnetic shielding structure comprising at least a first transparent substrate (20), a conducting element (30), optionally a transparent backing sheet (31) and a transparent tie sheet (22) and a transparent additional sheet (23) or covering sheet (24), electrical connection means (40) being intended to be connected to the conducting element (30) in order to ground the latter, characterized in that one at least of the backing sheet (31), the tie sheet (22) or the additional sheet (23) or covering sheet (24), when it is present, is, at least on one of its sides, placed set back toward the interior of the structure relative to the associated free edge of the transparent substrate (20) so as to leave a portion (32) exposed on at least one of the faces (30a, 30b) of the conducting element, the connection means (40) being placed against and/or connected to this exposed portion (32).
